Letter of recommendation

February 4, 2011

Nachum Sadan
CEO
Amperion Inc.
360 Merrimack Street
Lawrence MA 01741

Dear Mr. Sadan,

I would like to express my full satisfaction with the work Amperion has done for the Jamaica Public Service Company Limited (JPS) in Kingston Jamaica.

The project included the installation of powerline communications devices for a feeder metering application inside four substations. The installation in the first two substations was professionally done by the Amperion team jointly with JPS utility crew. The process also included hands on training of our staff and troubleshooting. The installation in the other two substations was done by trained JPS crew with remote technical support by Amperion. The project was completed on schedule and within budget. Based on the success of the first phase of this project, it is very likely that JPS will consider extending the deployment to additional substations, using Amperion equipment in future projects.

Amperion has shown a high level of professionalism in their work and a strong commitment to customer service. I would not hesitate in recommending Amperion for any other projects.

Sincerely,

Clive Wright
